CME

OUTFITTERS

Learning Objective 1

Incorporate germline and somatic genetic, genomic, and other biomarker testing that is necessary to inform treatment decision-making in OC.

CME
OUTFITTERS

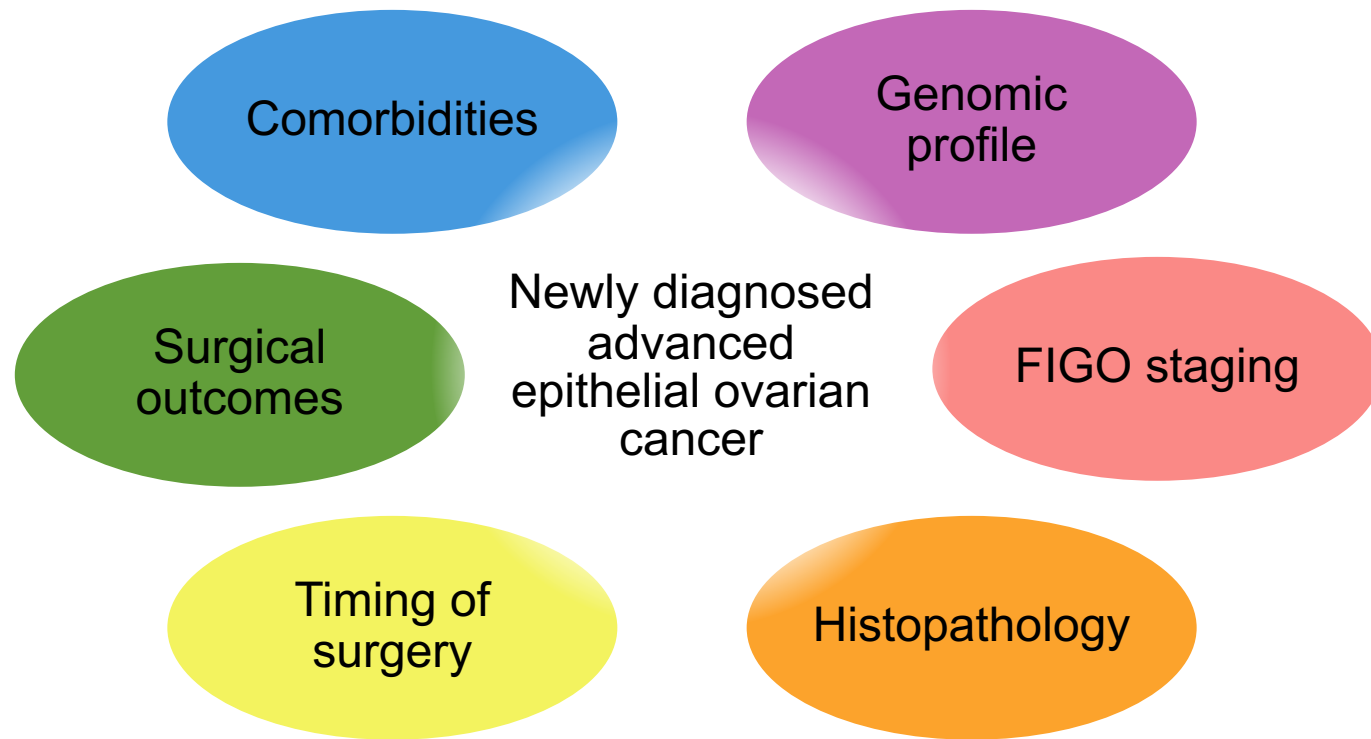

Learning
Objective **2**

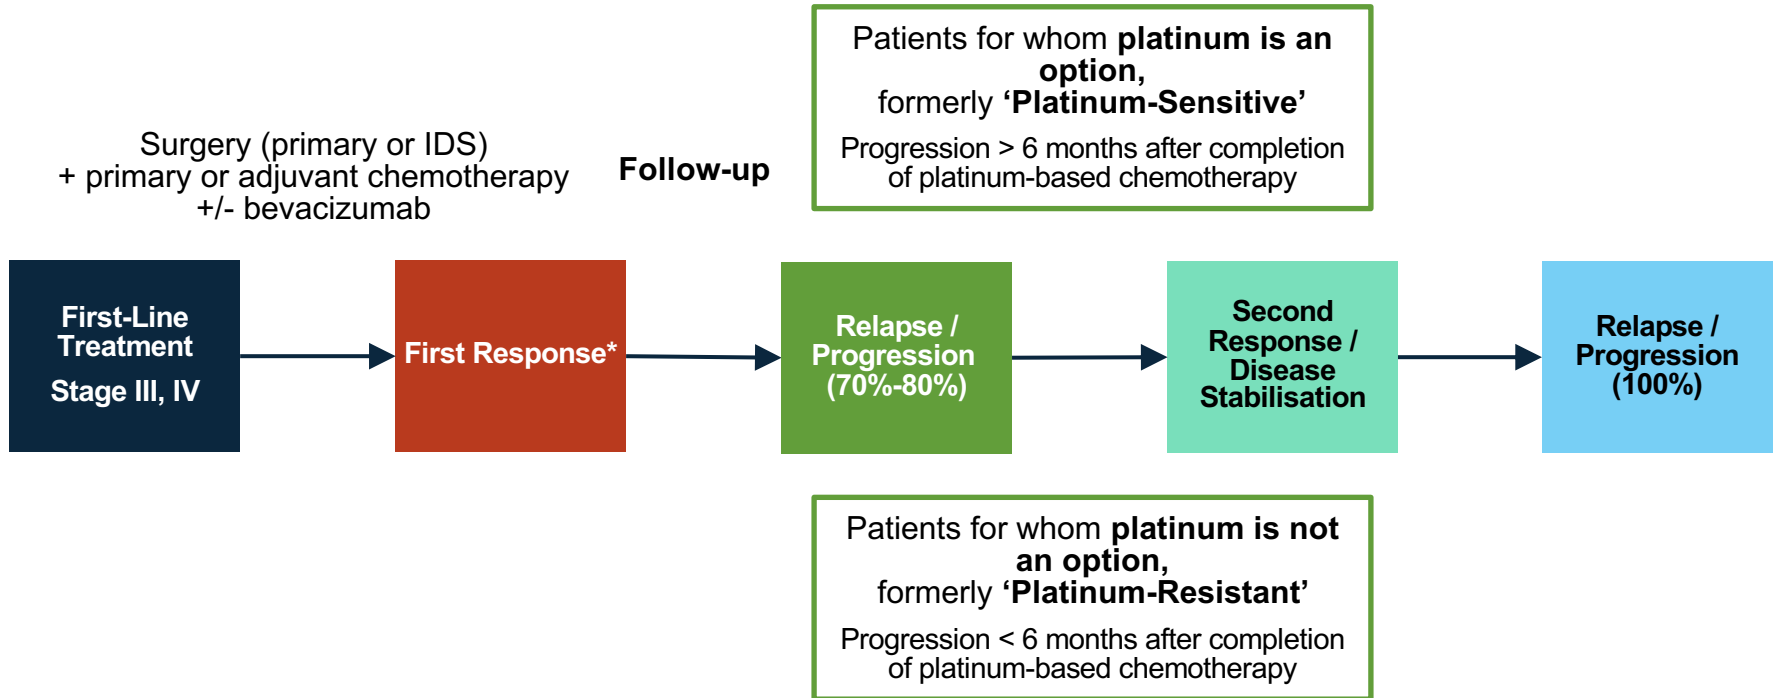

Evaluate recent evidence of mutation and biomarker connection to treatment efficacy.

Considerations for Selection of Frontline Therapy in Ovarian Cancer

The Typical Course of Advanced Ovarian Cancer

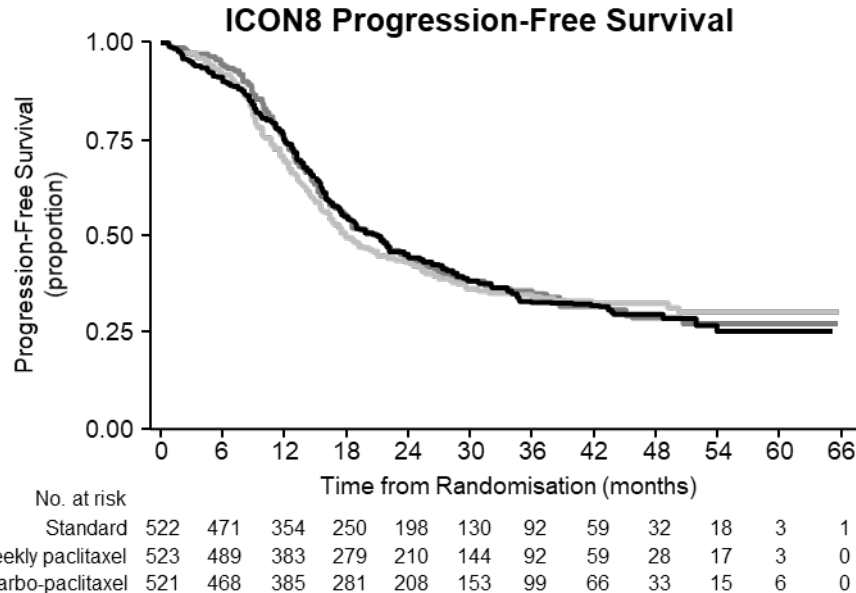

*Around 5% of patients are primary treatment-refractory, meaning disease progressed during therapy or within 4 weeks after the last dose.

IDS = Interval debulking surgery.

1. Ledermann JA, et al. *Ann Oncol.* 2013;24(Suppl 6):vi24-vi32. 2. Gianneli GH. *Springerplus.* 2016;5(1):1197. 3. Pignata S, et al. *Ann Oncol.* 2017;28(suppl_8):viii51-viii56. 4. du Bois A, et al. *Cancer.* 2009;115(6):1234-1244. 5. Wilson MK, et al. *Ann Oncol.* 2017;28(4):727-732.

Platinum Therapy Can't Get Much Better

| | Standard (n = 522) | Weekly paclitaxel (n = 523) | Weekly carbo-paclitaxel (n = 521) |
|---------------------------------------|-----------------------|-----------------------------------|---|
| Progressions | 330 (63%) | 335 (64%) | 338 (65%) |
| Median PFS, mo | 17.9 | 20.6 | 21.1 |
| Log rank (vs. standard) | | P=0.45 | P=0.56 |
| HR vs. Standard (97.5% CI) | | 0.92 (0.77–1.09) | 0.94 (0.79–1.12) |
| Restricted means | 24.4 mos | 24.9 mos | 25.3 mos |

Weekly dose-dense chemotherapy can be delivered successfully as first-line epithelial ovarian cancer treatment without substantial toxicity increase; it does not significantly improve PFS compared to standard 3-weekly chemotherapy

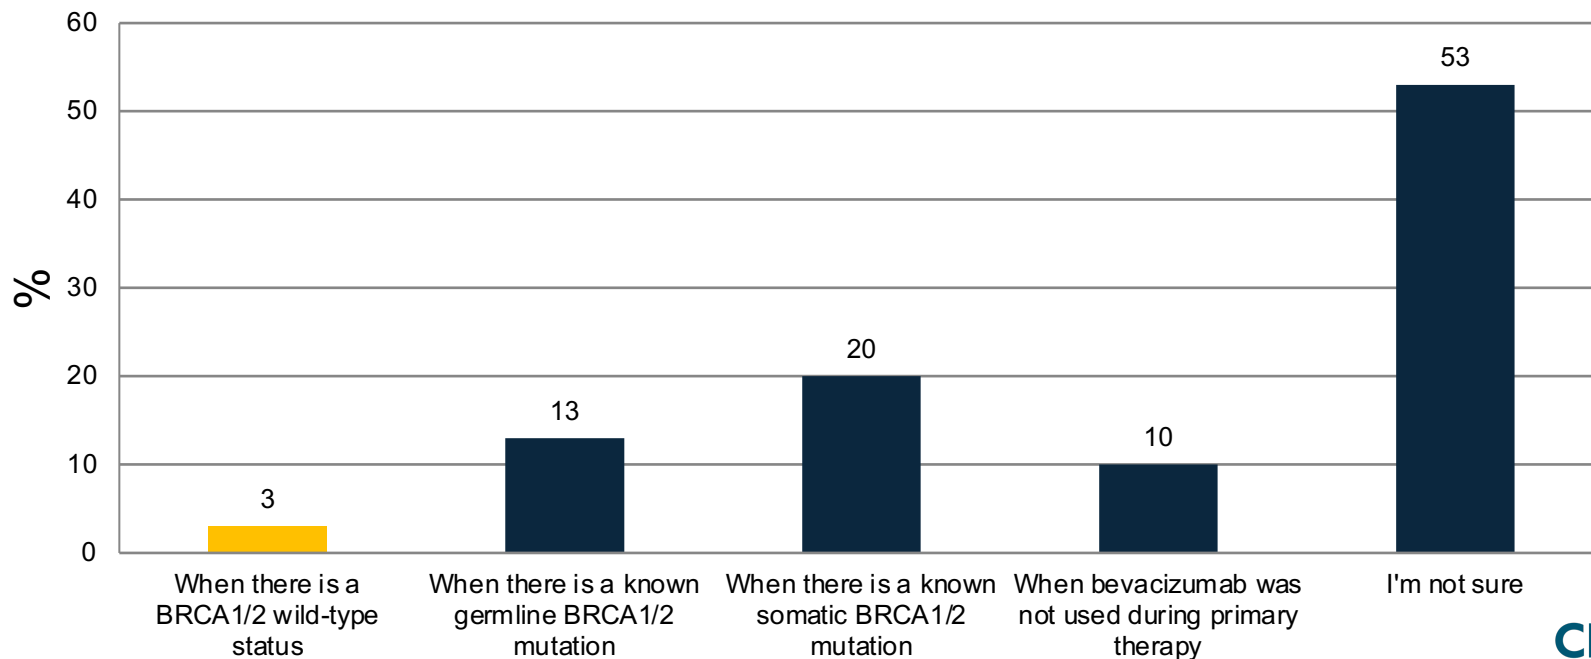

Polling Question

Following primary treatment with platinum-based chemotherapy resulting in a partial response, in which scenario will HRD testing inform next steps in therapy decisions?

- A. When there is a BRCA1/2 wild-type status
- B. When there is a known germline BRCA1/2 mutation
- C. When there is a known somatic BRCA1/2 mutation
- D. When bevacizumab was not used during primary therapy
- E. I'm not sure

Audience Response

Following primary treatment with platinum-based chemotherapy resulting in a partial response, in which scenario will HRD testing inform next steps in therapy decisions?

Which Patients Should Receive Genetic Testing?

Leading oncology societies recommend testing all women with ovarian cancer

NCCN

Genetic counseling and testing should be considered in women with a history of ovarian carcinoma, fallopian tube cancer, or primary peritoneal cancer¹

SGO

Women diagnosed with epithelial ovarian, tubal, and peritoneal cancers should receive genetic counseling and be offered genetic testing, even in the absence of family history²

ASCO

Genetic counseling and testing should be considered in women with epithelial ovarian, fallopian tube, or primary peritoneal cancer, even in the absence of family history³

ESMO

Patients with high-grade tumours should be tested for a germline *BRCA* mutation. Consideration should be given to testing tumours for a somatic *BRCA* mutation

Recommended testing sequence: Tumor *BRCA* first (larger population), Germline testing second (genetic counseling)

ASCO = American Society of Clinical Oncology. ESMO = European Society of Medical Oncology. NCCN = National Comprehensive Cancer Network. SGO = Society of Gynecologic Oncology.

Rationale for PARPi Treatment of Ovarian Cancer

- PARP repairs SSBs
- Normal and HR-proficient cancer cells can repair DSBs
- HR-deficient cancer cells rely on PARP to repair DSBs
- Inhibition of PARP results in "synthetic lethality"

Summary Of First-line Maintenance Studies

ITT = Intention to treat.

1. Moore K, et al. *N Engl J Med.* 2018;379:2495-2505. 2. González-Martin A, et al. *N Engl J Med.* 2019; 381(25):2391-2402. 3. Ray-Coquard I, et al. *N Engl J Med.* 2019;381(25):2416-2428.

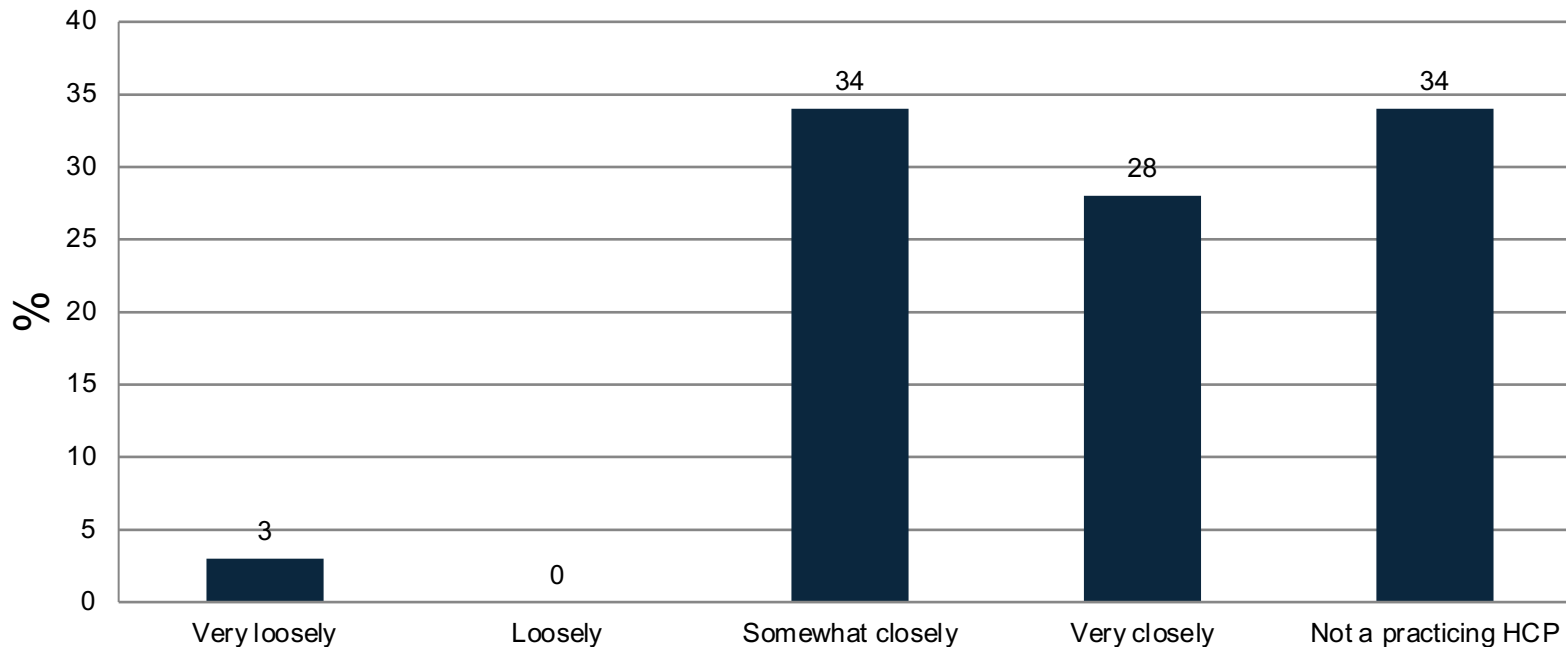

Polling Question

Now, how closely will you try to adhere to the NCCN frontline treatment guideline algorithm for ovarian cancer?

- A. Very loosely
- B. Loosely
- C. Somewhat closely
- D. Very closely
- E. Not a practicing HCP

Audience Response

Now, how closely will you try to adhere to the NCCN frontline treatment guideline algorithm for ovarian cancer?

Genetic Testing

- EOC has the highest percentage of hereditary cases observed, irrespective of selection criteria.
 - 20%-25% of unselected epithelial EOCs carry pathogenic variants (PVs) in several proteins involved in DNA repair pathways (BRCA1/2, CDK12, RAD51C, FA)
 - 10%-15% of hereditary EOC involve mismatch repair (MMR) pathway genes.
- Identification of HR deficient ovarian cancers has significant prognostic and predictive value for treatment planning.
- Tumor genetic testing should be obtained early in the treatment planning process.

Visit the CMEO Oncology Hub for a toolkit for talking to patients about genetic testing and counseling.

Monotherapy Anti-PD-L1/PD-1 in OC

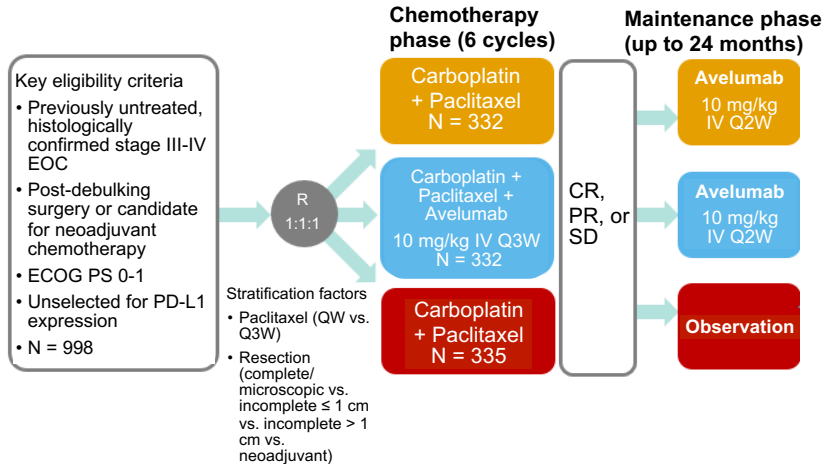

| Therapeutic agent | Phase and trial name | N | Setting | ORR, n/N (%) |
|-------------------|--|-----|---------|-------------------------|
| Atezolizumab | Ia (PCD4989g) ¹ | 12 | PR-ROC | 2/8 (25) ^{a,b} |
| Avelumab | Ib (JAVELIN solid tumor) ² | 75 | ROC | 8/75 (11) |
| Nivolumab | II (UMIN000005714) ³ | 20 | PR-ROC | 3/20 (15) |
| Pembrolizumab | Ib (KEYNOTE-100) ⁴ | 376 | ROC | 8.0 |

PD-L1/PD-1 inhibitors demonstrate modest activity in ROC, suggesting an opportunity for combinations and better patient selection

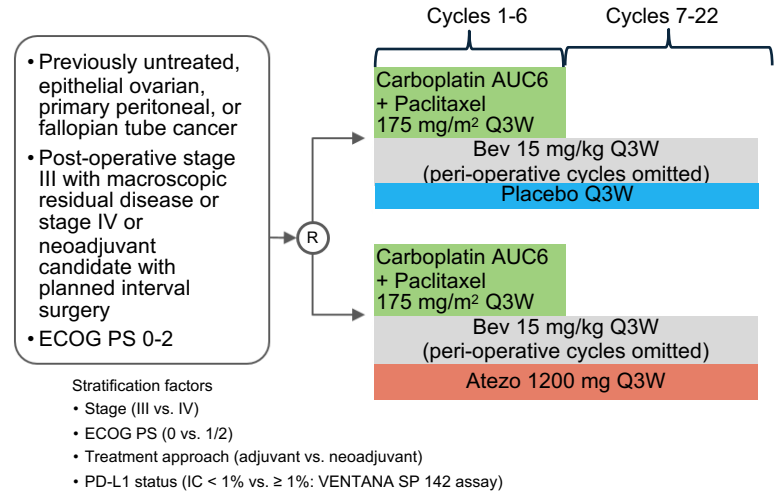

^aEfficacy-evaluable population included only patients who received ≥ 1 mg/kg (2 patients excluded; n = 10). ^bAn additional patient without measurable disease at baseline was excluded (n = 9). Kg = Kilogram. PR = Platinum resistant. ROC = Recurrent ovarian cancer.

| Median PFS, months (95% CI) | 18.4 (17.2-19.8) | 19.5 (18.1-20.8) |
| Stratified HR (95% CI) | 0.92 (0.79-1.07) | |
| Stratified log-rank p-value | 0.2785 | |
| 2-year event-free rate (95% CI) | 29.1(23.9-34.3) | 35.1 (30.0-40.3) |

No differences seen between study arms in either trial

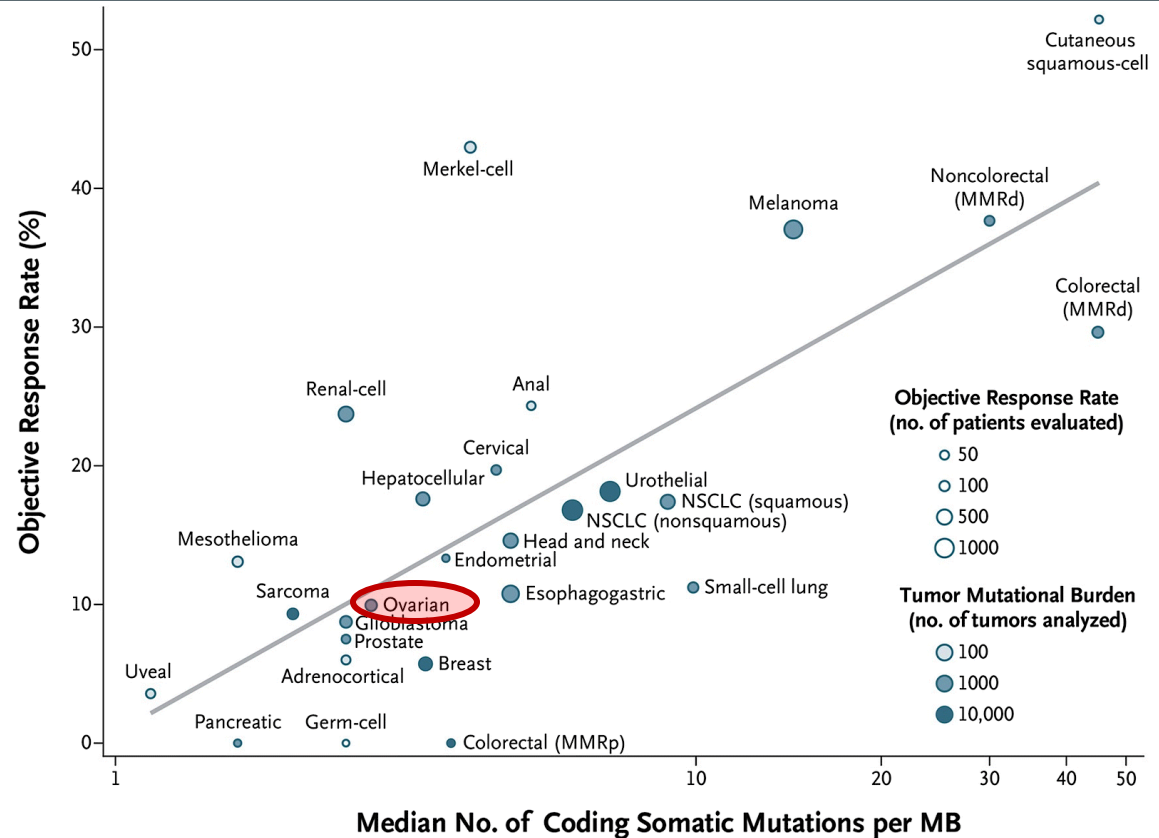

NE = Not evaluable.

1. Ledermann JA, et al. *Gynecologic Oncology*. 2020;159(Suppl 1):S13-S14. 2. Moore KN, et al. *J Clin Oncol*. 2021;39(17):1842-1855.

Why Were ICI Therapies Ineffective?

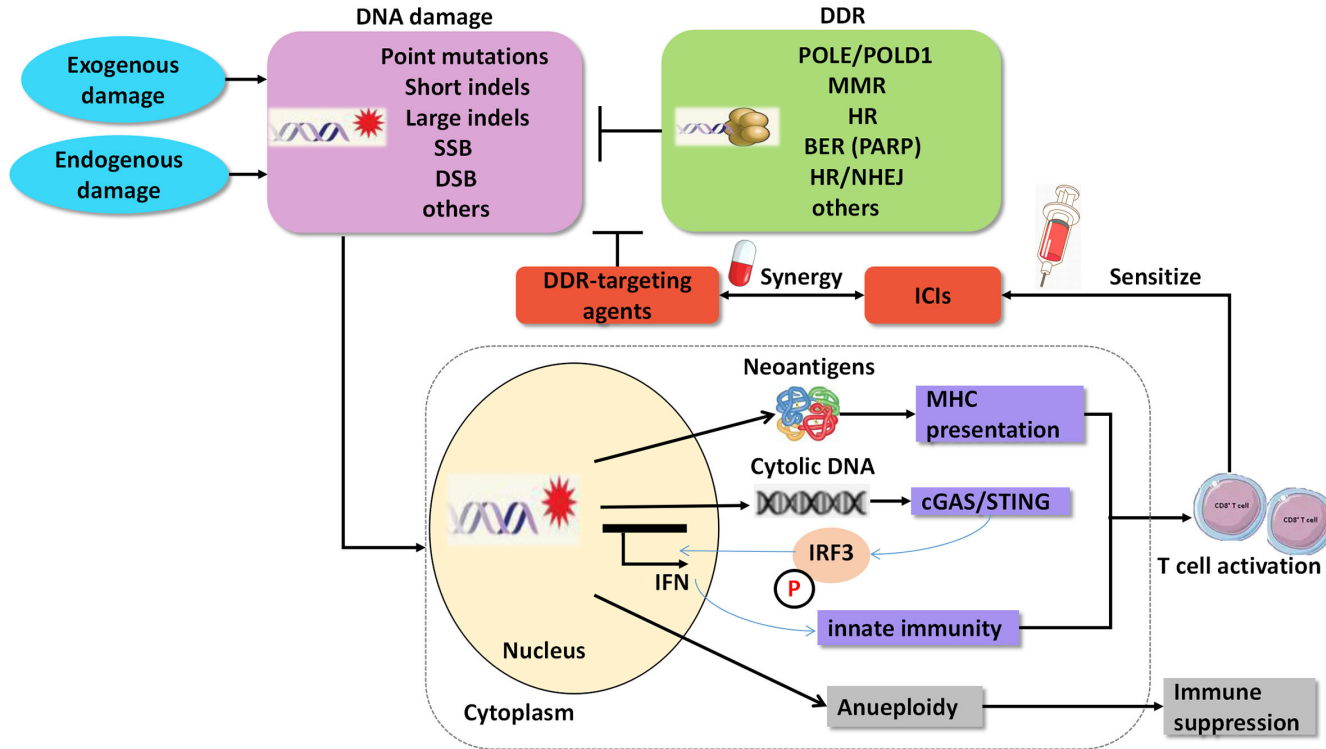

- At baseline, most of epithelial ovarian cancer has a lower probability of responding to immunotherapy^{1,2}
- Over-expression of FasL, VEGF and may impair T-cell trafficking, although if this were major obstacle, IMagyn050 should have worked
- No biomarkers for patient selection
- How about combinations?

MB = Megabase. VEGF = Vascular endothelial growth factor.

1. Borella F, et al. *Diagnostics (Basel)*. 2020;10(3):146. 2. Arora S, et al. *Adv Ther*. 2019;36(10):2638-2678.

Rationale for ICI + PARPi Combination Therapy

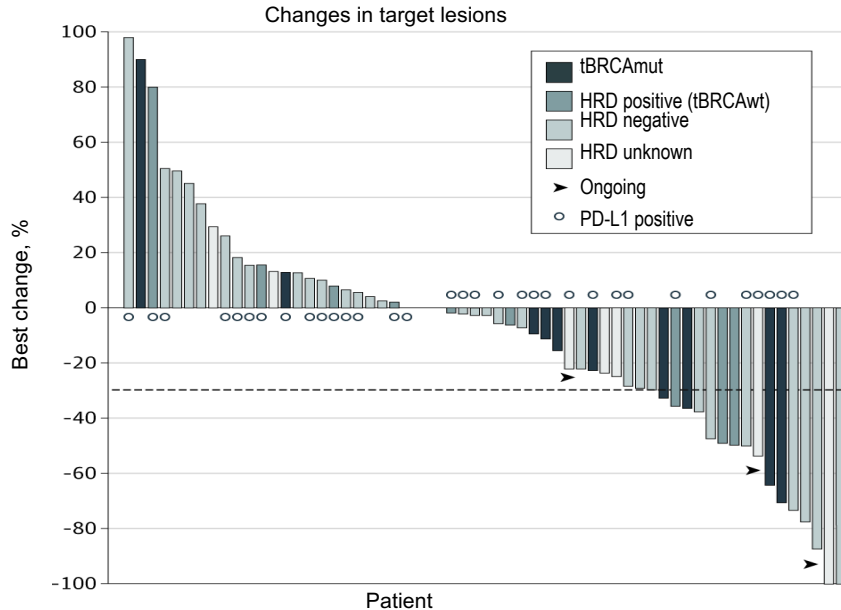

- DDR deficiency leads to somatic mutations and neoantigens, which can lead to an immune response
- Damaged DNA which transfers from the nucleus to the cytoplasm = cytosolic DNA. This can activate stimulator of interferon genes (STING), which can trigger an immune response

BER = Base excision repair. cGAS = cGAMP synthase. DDR = DNA damage repair. ICI = Immune checkpoint inhibitor. IFN = Interferon. MHC = Major. Histocompatibility complex. NHEJ = Non-homologous end joining. POLE/POLD1 = Polymerase epsilon and delta 1. Sun W, et al. *Front Oncol.* 2021;11:648687

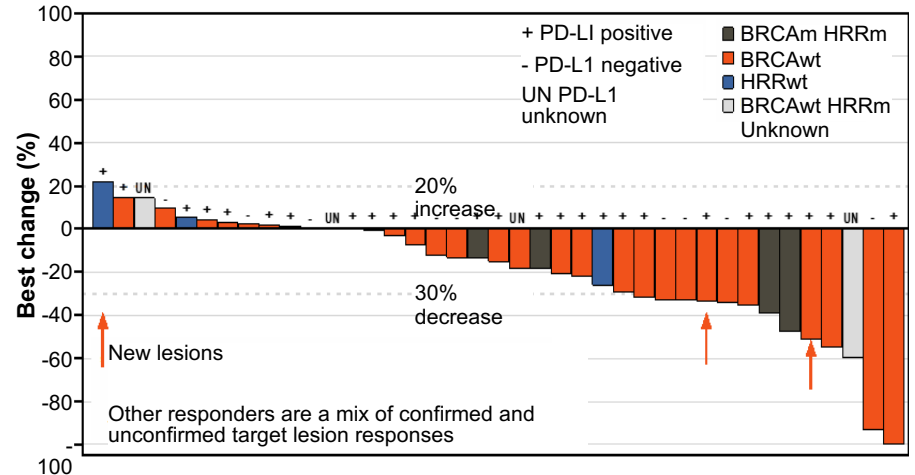

ICI + Niraparib

TOPACIO¹ Niraparib + Pembrolizumab

ORR, 18% (11%-29%), DOR, not reached

OPAL² Niraparib + Dostarlimab + Bevacizumab

ORR, 17.9% (8.7%-31.3%)

MEDIOLA: Durvalumab + Olaparib ± Bevacizumab

| Genomic instability status* subgroup | Olaparib + durvalumab + bevacizumab | | Olaparib + durvalumab | |
|--------------------------------------|-------------------------------------|--------------|-----------------------|--------------|
| | ORR (95% CI), % | n/N patients | ORR (95% CI), % | n/N patients |
| GIS-positive | 100.0 (69.2-100.0) | 10/10 | 50.0 (18.7-81.3) | 5/10 |
| GIS-negative | 75.0 (34.9-96.8) | 6/8 | 16.7 (0.4-64.1) | 1/6 |
| GIS-unknown | 84.6 (54.6-98.1) | 11/13 | 31.3 (11.0-58.7) | 5/16 |

GIS = Genomic instability score. IQR = Interquartile range.
Drew Y, et al. *Ann Oncol.* 2020;31(suppl 4):S615-S616.

MEDIOLA: Durvalumab + Olaparib ± Bevacizumab

| Genomic instability status* subgroup | Olaparib + durvalumab + bevacizumab | | Olaparib + durvalumab | |
|--------------------------------------|-------------------------------------|--------------|-----------------------|--------------|
| | ORR (95% CI), % | n/N patients | ORR (95% CI), % | n/N patients |
| GIS-positive | 100.0 (69.2-100.0) | 10/10 | 50.0 (18.7-81.3) | 5/10 |
| GIS-negative | 75.0 (34.9-96.8) | 6/8 | 16.7 (0.4-64.1) | 1/6 |
| GIS-unknown | 84.6 (54.6-98.1) | 11/13 | 31.3 (11.0-58.7) | 5/16 |

GIS = Genomic instability score. IQR = Interquartile range.
Drew Y, et al. *Ann Oncol.* 2020;31(suppl 4):S615-S616.

Ongoing Front-Line Studies

| Trial | Size | Anti-angiogenic | PARPi | ICI | Start | Estimated Primary Completion |
|--|--------|-----------------|-----------|---------------|-------------|------------------------------|
| KEYLYNK-001 / ENGOT OV-43 (NCT03740165) ¹ | ~ 1086 | ± Bevacizumab | Olaparib | Pembrolizumab | Dec 2018 | Aug 2025 |
| FIRST / ENGOT OV-44 (NCT03602859) ² | 1405 | ± Bevacizumab | Niraparib | Dostarlimab | Oct 2018 | Jan 2023 |
| ATHENA / GOG-3020 / ENGOT OV-45 (NCT03522246) ³ | ~ 1000 | -- | Rucaparib | Nivolumab | May 2018 | Dec 2024 |
| DUO-O / ENGOT OV-46 (NCT03737643) ⁴ | ~ 1254 | Bevacizumab | Olaparib | Durvalumab | Jan 2019 | June 2023 |

Summary

- Standard platinum therapy has reached its maximum potential.
- Our current guidelines are based on knowledge of tumor biomarker status.
 - Prognostic and predictive biomarkers have value in treatment planning
 - A third to half of ovarian cancers have HRD, making them susceptible to PARP inhibitors.
 - Early determination of BRCA1/2 status informs maintenance therapy
 - HRD status in the absence of BRCA1/2 mutations may inform maintenance therapy
- Ongoing trials are examining new combinations of chemotherapy, PARP inhibitors, bevacizumab, and immune checkpoint inhibitors.

SMART Goals

Specific, Measurable, Attainable, Relevant, Timely

- Order early tumor genetic testing to determine BRCA and HRD status in all ovarian cancers
- Adhere to treatment guidelines that incorporate MSI, MMR, and TMB biomarker data to inform treatment
- Recommend participation in clinical trials that explore PARPi and ICI combination therapies
